github.com/jsjohn1951
Abu Dhabi, UAE

Full-stack engineer who ships and owns production systems end to end — React / Next.js and Go / Node on Dockerized CI/CD — with a low-level C / C++ foundation from 42 Abu Dhabi and a growing focus on agentic AI.

EXPERIENCE

Suportech Embedded
Apr 2026 – Present

Embedded Software Developer · Part-time

- Developing desktop software in **Python** (PyQt5 front end, Flask backend) with automated **CI/CD** release delivery.
- Implemented data security with **envelope encryption (DEK / KEK)** to protect sensitive data at rest.
- Built an application updater with a **CI/CD pipeline** that publishes versioned executables to a registry for automated rollout.
- Authoring **unit tests** on GitHub Actions (windows-latest) runners, with changes gated by code review before merging to dev.

Ratchet Capital
Apr 2024 – Apr 2026

Full Stack Developer · Abu Dhabi, UAE · Full-time

- Shipped through a code-review-gated Git workflow — feature branches reviewed before merging to **dev**, with weekly **dev** → **main** production releases.

Megastars.ai v2 — Next.js · Supabase · TypeScript · Cloudflare

- Supported **500+ active influencers** at **99.9% uptime** and 10K+ daily auth requests, delivering full-stack features across the Next.js / Supabase platform.
- Configured multi-provider OAuth (Instagram / TikTok / YouTube), built dashboard features, and improved landing-page SEO.

Influenz — Megastars.ai v1 — Tech Lead — Vue · Gin (Go) · Node · PostgreSQL · Docker

- Led a 4-developer team architecting a **4-service Dockerized microservices** platform behind Nginx — Vue / Vite frontend, Gin (Go) API, a dedicated Node OAuth 2.0 / identity service, and PostgreSQL.
- Standardized environments with separate **dev and prod Docker Compose** stacks driven from a root Makefile, sharing inherited service definitions for DRY config and clean separation of concerns.
- Provisioned **staging and production DigitalOcean droplets** on self-hosted Linux GitHub Actions runners, with a rolling-deploy workflow and automated rollback.

Verif-y — Frontend Developer — React Native · Expo · TypeScript

- Cut document-verification time **~60%** with a cross-platform iOS / Android app — canvas signature capture and skeleton loading.

ioMega Energy — Solo — Eleventy · SASS · Docker · Nginx · GSAP

- Scored **95+ Lighthouse** and cut CSS 60% on a production SEO site with sub-2.1s loads; zero-downtime rolling deploys via GitHub Actions.

Trescudo — Solo — Eleventy · Nunjucks · Docker · Nginx

- Hit **98 performance** with 85% image-size reduction (WebP) and sub-100ms responses on a cybersecurity marketing site.

SELECTED PROJECTS

Jarvis Jun 2026 – Present — SwiftUI · Node.js · Claude Agent SDK · llama.cpp

Native macOS voice assistant with wake-word detection and on-device speech recognition, orchestrated by a Node/TypeScript daemon on the Claude Agent SDK — 42 tok/s on-device within an 18 GB budget, plus an iOS companion app with on-device fallback.

Cormonity Jun 2026 – Present — Vue.js · NestJS · PostgreSQL · MQTT · Three.js

Ethical, community-based social platform — a Vue 3 SPA rendering an interactive 3D community graph (Three.js + D3-Force), backed by a NestJS / PostgreSQL API with real-time messaging over MQTT.

Jellybean PM Apr 2026 — Astro · GitHub Issues API · TypeScript

GitHub-Issues-powered project-management integration for Astro — drag-and-drop Kanban, sprint planning, milestones, time tracking, a docs browser, and real-time chat with no external database or SaaS.

42 COMMON CORE PROJECTS

- **ft_transcendence** Jun 2023 – Nov 2023 — Frontend Lead: built the Nuxt.js dashboard incl. stats-count components; WebSocket chat frontend with direct messages (DM) and group messaging (GM) Nuxt.js · WebSockets · Nest.js · PostgreSQL · Docker
- **ft_irc** Mar 2023 – Jun 2023 — led a 3-engineer team; designed the server architecture; poll()-based message polling and dispatch; verified against real-world IRC clients (irssi) C++ · Sockets · poll()
- **Inception** Feb 2023 – Mar 2023 — Dockerized MariaDB / WordPress / Nginx stack via Docker Compose, built and evaluated inside a virtual machine Docker · MariaDB · WordPress · Nginx
- **minishell** Aug 2022 – Oct 2022 — co-led a 2-person team; focused on the parser (tokenizing, expansions); contributed to execution and refactored for clean C C

MENTORING & COMMUNITY

Student Tutor — Aug 2022 – Present

Mentor peers on build systems (Makefiles) and memory-management practices at 42 Abu Dhabi.

SKILLS

LANGUAGES
TypeScript · Go · C / C++ · Python · SQL

FRONTEND
React · Next.js · Vue / Nuxt · Tailwind · GSAP

BACKEND
Node / Express · Gin · Flask · Supabase · PostgreSQL · REST · OAuth 2.0

DEVOPS
Docker · GitHub Actions (self-hosted runners) · DigitalOcean · Nginx · Cloudflare · Rolling deploys & rollback

EMBEDDED / DESKTOP
Python · PyQt5 · Flask · DEK / KEK encryption · Unit testing

AI
Claude Code · Agentic workflows · Local LLMs · Prompt engineering

STRENGTHS

Technical leadership · Mentoring · Ownership · Communication · Pragmatic problem-solving · Adaptability · Cross-team collaboration · Attention to detail · Continuous learning

EDUCATION

42 Abu Dhabi
Software Engineering — Common Core
2021 – 2023

Peer-to-peer, project-based curriculum: low-level C / C++, Unix systems, concurrency, networking, algorithms, and DevOps.

ACHIEVEMENTS

- **42 Common Core Certification**
  42 Abu Dhabi · Nov 2023
- **AgentEra AI Hackathon**
  MOEI × 42 Abu Dhabi — Certificate of Appreciation

LANGUAGES

English	Native
Afrikaans	Native
Spanish	Beginner
